

HENSCHTEL TECHNOLOGIES

Drink from the *stream*, not the *bucket*.

Your IT information, always fresh. Always flowing. Never stale.

Here's how IT information has always worked: someone collects it, lets it sit, then carries it to a meeting and presents week-old water. Stagnant. Flat. Dead.

Henschel works differently. Our systems stream live — your network, your security, your costs, your tickets — updating constantly, like a river that never stops. You walk up when you're thirsty. You review on your time, your topics. It's always fresh, always swimmable, no matter when you arrive.

THE OLD WAY

The Bucket

- ✗ Reports written, then they age
- ✗ Meetings to present stale data
- ✗ You wait for someone's schedule
- ✗ Decisions on last week's picture
- ✗ Information dies in inboxes

THE HENSCHEL WAY

The Stream

- ✓ Live data, updating every few seconds
- ✓ No meetings needed — it's always current
- ✓ You review on your time, your topics
- ✓ Decisions on this morning's picture
- ✓ Information flows, always

"You don't schedule a meeting to review last week's data when you can drink from today's stream."

— LOUIS G. HENSCHEL, FOUNDER

HOW IT WORKS

1

We build your stream

Every system you have — network, security, tickets, costs — feeds one live stream of information.

2

It never stops flowing

The stream updates constantly. Morning, night, weekend — it's always fresh when you arrive.

3

You drink when you're thirsty

Open your dashboard anytime. Check what you want. No waiting, no meetings, no stale reports.

Always fresh. Always flowing.

Stop drinking from the bucket.

Henschel Technologies builds live information streams for small and mid-size businesses across Delmarva — so you always know exactly where you stand, the moment you want to know.
